- ☑ TL-LTL Shipping
- ☑ Pick Pack
- ☑ BOL
- ☑ Packing List
- ☑ UCC-128 Labeling

SHIPPING FULFILLMENT
for SAP Business One

Agility Fulfillment provides you with standard processes for packing and shipping carton and pallet packaging. And to shorten your production to shipping time, Agility Pallets can be used out of the box or tailored to give you the ability to report production of Finished Goods in Production directly to a pallet. If you are shipping full pallets, then these pallets can be loaded directly onto a shipment using a mobile data collection device or on a workstation.

Agility Fulfillment will print any type of documentation required by your drivers, including a Bill of Lading (BOL) or a Packing List. These documents are defined using standard Crystal Reports or Agility Label Designer and are highly modifiable. All documents can be specified by customer so the users in the warehouse do not have to worry about which documents to print.
